Corona Virus Pandemic Redefining Purpose of Secondary Education in 21st Century in India : A Case Study

Priyanka Suryavanshi*

Introduction

In the world of globalization, modernization and privatization our country has witnessed cultural transition in different aspects of lifestyle, business and education. If we analyse historically our education system was related to self development. When we read about Gurukul system it was not just developing academic skills but was overall development of students. It included self awareness, vocational skills and life skills. Like every sector our education system too got impacted and slowly competition entered the level of being best and perfect. The focus shifted from self to getting fit in the social system. After independence education system shifted from being child centered to class room or mass education. Slowly it became a race to produce best products for competing market. The aim and objective of education for Indian parents and educators is to make their children ready for jobs and market demands.

*Assistant Professor, Department of Home Science, Khwaja Moinuddin Chishti Language University, Lucknow.
